H 610

The H 610 is compact (dimensions are smaller than 1,400 mm x 800 mm), designed to easily fit through standard domestic and office doorways. It is a very simple, high performance, and ergonomic machine that ensures maximum comfort for the user, and surprisingly good results even in the harshest working conditions. The new H 610 scrubber-dryer represents the state-of-the-art solution for cleaning medium- and large-size flooring, such as supermarkets, hospitals, warehouses, gyms, schools, hotels – wherever there is a need for a machine that is compact, efficient, reliable, safe and comfortable, but also good value for money.

TANKS

The special tank configuration (tanks are concentric and tilting) provides great stability and excellent accessibility, making maintenance easier as a consequence. Above all, the motor is protected by the two tanks and this makes the machine extremely quiet. The solution tank has a capacity of 110 litres, while the recovery tank's capacity is 115 litres. Both the tanks can be easily accessed for simpler cleaning. Dirty water can be easily discharged using a drain hose positioned in the back.

DESIGN AND ERGONOMICS

During the design phases of the H 610, ergonomics played an important role; despite the machine being compact, the operator can enjoy spacious leg room, which enables comfortable use for many hours at a time. The user-friendly and intuitive control panel is equipped with a "One-Touch-Button", which enables the user to activate all the functions simultaneously. The control panel also handles the electrical lifting of the head and the squeegee.

PERFORMANCES

The Dulevo ride-on scrubber-dryer is battery powered and has a battery life of more than three hours. It is also equipped with a floating brush head, which maintains the correct working pressure. The expert mechanical design of the machine guarantees maximum reliability. The machine, which assures a scrubbing width of 600mm, has a traction power of 700 W, which enables speeds of up to 5 km/h and can overcome 12% slopes.

STANDARD EQUIPMENT AND OPT

The H 610 scrubber-dryer, comes with flasher and non-marking wheels as standard, and can be optionally equipped with: battery charger on the machine, "Canal Jet" aspirator/extractor to clean in corners and tight spaces, and the LR System - already available on the other Dulevo ride-on scrubber-dryers - which makes it possible to increase working times and improve productivity by avoiding stopping to refill the tank (thanks to the recovery tank recycle system).

SQUEEGEE

The parabolic squeegee is located behind the rear wheels, and it ensures perfect drying on an 800 mm path thanks to its perfect adherence to every kind of surface and, when the machine goes backwards, it automatically lifts up. Squeegee blades can be changed without using tools.

TECHNICAL DATA		610
Scrubbing path:	mm	600
Squeegee width	mm	800
Cleaning performance	sqm/h	3250
Solution tank capacity	Lt.	110
Recovery tank capacity	Lt.	115
Tank material		POLYETHYLENE
Number/Brushes size	n°/mm	2/330
Maximum brush pressure	Kg	40
Number of & Brush motor power	n°/W	2/350
Speed control		ELECTRONIC
Brush pressure control		ELECTRIC
